

RackNet™

RackNet™ is a remote monitoring and information management solution for facilities equipped with the Innovive Disposable IVC Rodent Caging System. RackNet™ software is installed on your internal server and communicates wirelessly with the digital controllers on your Innovive IVC racks. Secure access to controls and data at each rack is then readily available from any web-enabled computer or mobile device that has been granted access to the network.

MAIN FEATURES

- » 100% hosted solution, no server to install and maintain
- » Automatic redundancy and backup
- » Uses latest Internet security protocols, authentication, and encryption
- » Secure access to information from any location
- » Room level temperature & humidity tracking and alerting

MONITORING

- » ACH and DP
- » System and power alarms
- » Monitor by rack, room building, or site

NOTIFICATIONS

- » Automatic email and/or text alerts to multiple recipient
- » Issue tracking
- » Change in airflow settings notification

HISTORY LOG

- » Complete log of all alarms and loss of power
- » System uptime
